---

Dear Prof. Kaveh Madani and Under-Secretary-General Tshilidzi Marwala,

We write to express our shock and deep concern regarding the “strategic partnership” between Nestlé, the world’s largest transnational food corporation, and the United Nations University (UNU) Institute for Water, Environment and Health (INWEH), which establishes the World Food Academy 4 Sustainable Food Systems.<sup>1</sup>

At a time when global food systems are under intense scrutiny for their role in driving malnutrition in all its forms, including a startling increase in diet-related chronic disease, the integrity and independence of nutrition education and professional development must be held to the highest standard. This is especially important within United Nations (UN) affiliated institutions, who others look to for leadership. This partnership, which will embed Nestlé within UNU food and nutrition education and young professional development, represents a patent and worrisome conflict of interest, given long-standing evidence of the company in using professional training and sponsorship as a marketing strategy. As authors of the *Lancet* 2023 Breastfeeding Series reported, Nestlé pioneered medical marketing, including the use of health professionals as “influencers” to shape parental perceptions and feeding decisions, thereby normalising the use of commercial milk formulas, and expanding market demand under the guise of trusted, expert guidance.<sup>2</sup>

This partnership is also out of step with evidence showing that public-private partnerships with the food industry are of no or very limited effectiveness in achieving health or knowledge objectives, while conferring disproportionate advantages to commercial actors. The ultraprocessed food industry and its front groups, have a long history of using such partnerships to delay or circumvent binding government regulation, and to push ineffective voluntary self-regulation instead.<sup>3</sup> Such partnerships form part of longer-term strategies through which corporations

position themselves as legitimate actors in food and nutrition governance.<sup>4</sup> The world's leading civil society groups and social movements concerned with food and nutrition, have actively resisted ongoing corporate efforts to exert undue influence over, and shape the agendas of, UN institutions and processes.<sup>5</sup>

Nestlé is one of the world's largest manufacturers of ultra-processed foods, a leading contributor to the global rise of diet-related chronic disease, as substantiated by the recent *Lancet* Series on Ultra-processed Foods and Human Health.<sup>6</sup> Nestlé's egregious unethical marketing activities of infant formula triggered the World Health Assembly to establish the International Code of Marketing of Breast-milk Substitutes in 1981, updated every two years since, through further World Health Assembly resolutions (The Code).<sup>7</sup> A substantial body of evidence documents the company's central role in expanding markets for these products, including marketing practices linked to preventable infant deaths and malnutrition, while exacerbating environmental harms globally.<sup>8,2</sup> Nestlé continues to repeatedly breach The Code, undermining global efforts to protect, promote, and support breastfeeding, prevent misinformation, reduce child malnutrition and mortality, and promote sustainable development.<sup>2,9</sup> Nestlé participates in industry associations that actively lobby against public health regulations, including measures to restrict the marketing of ultra-processed foods and implementation of The Code, as well

<sup>8</sup> Anttila-Hughes, J. K., Fernald, L. C., Gertler, P. J., Krause, P., Tsai, E., & Wydick, B. (2018). Mortality from Nestlé's marketing of infant formula in low and middle-income countries (No. w24452). National Bureau of Economic Research; Baker, P., Slater, S., White, M., Wood, B., Contreras, A., Corvalán, C., ... & Barquera, S. (2025). Towards unified global action on ultra-processed foods: understanding commercial determinants, countering corporate power, and mobilising a public health response. *The Lancet*, 406(10520), 2703-2726; United Nations Children's Fund (UNICEF), Ultra-processed Foods and Children. State-of-the-art review, UNICEF, New York, December 2025.

<sup>9</sup> Pérez-Escamilla, R., Tomori, C., Hernández-Cordero, S., Baker, P., Barros, A. J., Bégin, F., ... & Richter, L. (2023). Breastfeeding: crucially important, but increasingly challenged in a market-driven world. *The Lancet*, 401(10375), 472-485.

as other policy measures intended to protect, promote, and support breastfeeding and healthy population diets.<sup>10</sup>

These concerns have been consistently articulated by the World Health Organization (WHO), the directing and coordinating authority on international health within the United Nations' system, including guidance on engagement with the private sector.<sup>11</sup> UNICEF, the United Nations agency responsible for delivering humanitarian aid to children worldwide, has developed principles of engagement with the food industry, noting substantial risks to child health and nutrition.<sup>12</sup> Leading health professional organisations worldwide, including in India, Italy, Australia, New Zealand, Ghana, United Kingdom, and South Africa, have ended their collaboration with companies that market foods for infants and young children, because such relationships risk compromising professional integrity and public trust.<sup>13</sup>

Against this backdrop, the decision by UNU-INWEH to engage in a partnership with Nestlé on nutrition education and young professional development is difficult to reconcile with the principles of independence, scientific integrity, and protection of the public interest and child rights, that underpin the United Nations system. It is misaligned with the standards and norms applied by WHO and UNICEF, which maintain strict policies governing engagement with the private sector, and by those applied by other UN agencies, as outlined in the United Nations Sustainable Development Group (UNSDG) Common Approach to Prospect Research and Due Diligence for Business Sector Partnerships.<sup>14</sup>

Education must be rigorously protected from political and commercial interference if future health professionals and nutrition leaders are to exercise independent judgment in the public interest. Industry involvement in the development of educational content and delivery is in no way neutral. Rather, it represents a sophisticated form of influence that operates beyond conventional advertising by embedding corporate perspectives within spaces that are presumed to be objective and evidence-based. When such initiatives are tied to prestigious UN institutions, they acquire legitimacy and authority by association, amplifying their persuasive

power, and helping to build brand identity and credibility. This “blue-washing” risks reshaping curricula, normalising industry framings of nutrition and health, and obscuring well-documented evidence of corporate harm.<sup>6</sup>

We therefore call on UNU-INWEH to immediately end this partnership with Nestlé.

More broadly, we urge all UN-affiliated institutions to exercise their global responsibility to the people of the world by limiting their engagements with corporate actors whose commercial interests undermine public interests, including human and planetary health. The credibility of the UN system, and its ability to act in the public interest, depends on the clear and strong separation of independent public health functions from the influence of vested commercial interests. Affiliated institutions should follow rigorous due diligence, duty of care, and procedures that prevent interference and undue influence from health harming industries.

We have invited colleagues across academia, public health, and civil society, to join us in calling for an end to this partnership. Please find their signatures below.

Sincerely,
